

## The Incredible ITS.11204

Just a few of the Concealed Cam Action's unique advantages...

- **Can be used on 44mm FD30 Doors without "shadowing"!**

Rutland ITS.11204 is one of the slimmest concealed closers with its 32mm wide mechanism *after* Intumescent kit is fitted. Some concealed Cam Actions finish up 36mm wide after being wrapped in intumescent—a whole 4mm extra to chop out of the door! This means that Rutland intumescent fitted Concealed Cam Action Closer can be used on 44mm doors without "Ghosting" appearing in the timber face. For your customer this can reduce the overall cost of a project.

- **Fire & Smoke tested without extra Smoke Fins on connector bar**

Some concealed slide arm closers have passed the smoke test by using plastic fins attached to the connector bar. The Rutland ITS.11204 passed the smoke test without any additional assistance. It is designed with zero tolerance and the intumescent acts as the smoke seal. For your customers, using the ITS.11204 means that the polished chrome, brass or satin stainless connector bar isn't spoiled by extra smoke fins and still coordinates visually with the finish of the handles and other door furniture. The visual appearance is critical for Interior Designers with their high profile projects.

- **PowerLatch closing**

The nature of the Cam has been known to create floppy un-positive latch with some makes of Cam Actions closers. This soft latch can be a problem when affected by only small amounts of air movement, through-drafts or air conditioning. The firm latch of the Rutland ITS.11204 is difficult to achieve and we're delighted to say we've mastered this! This means you can have the confidence when specifying concealed cam actions that you will achieve a safe, firm latch which is critical with fire doors.

- **Sturdy durable valves**

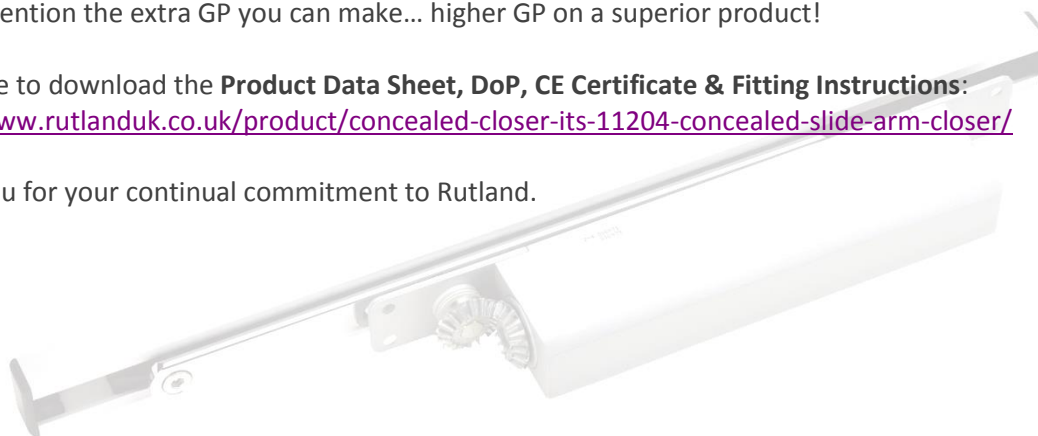

Rutland don't use tiny Allen Key type brass valve adjustment. We made this decision because the brass can be easily rounded off when adjusting which, when this happens renders the Door Closer inoperable and therefore involves expensive replacement. Rutland's ITS.11204 cam action valve controls are sturdy, and operated with screwdriver giving many years of usage and therefore value for money.

Not to mention the extra GP you can make... higher GP on a superior product!
